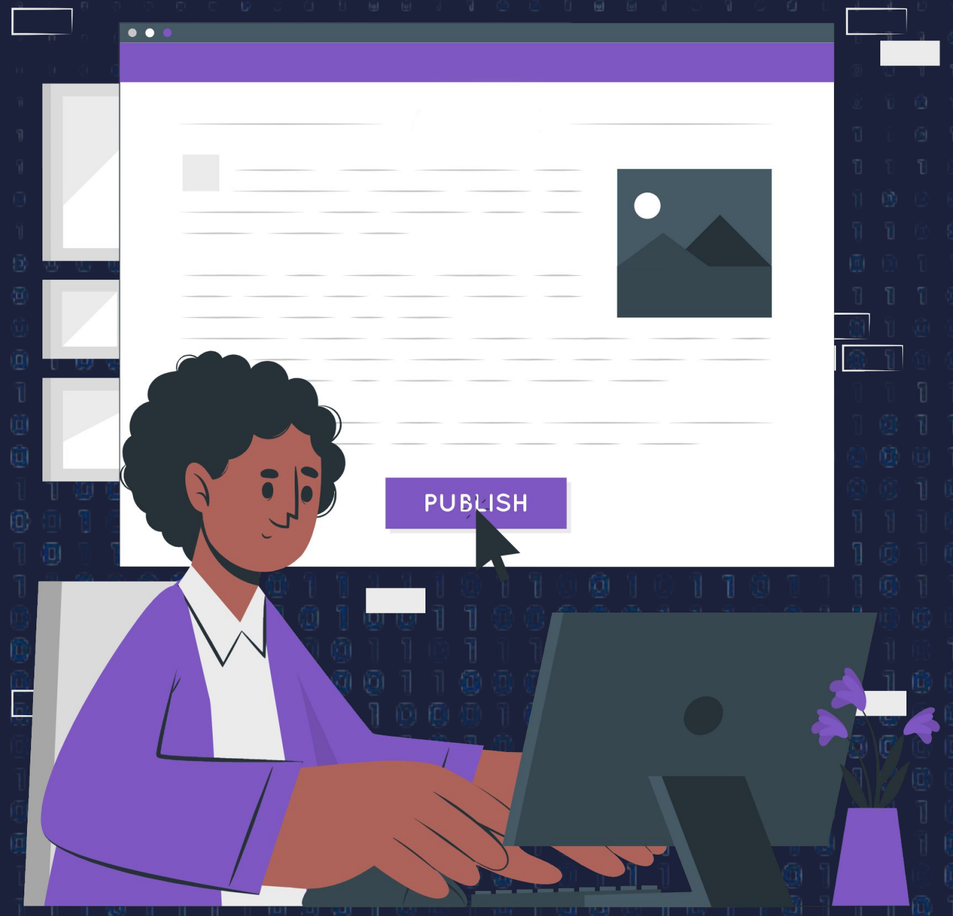
Different platforms to write blogs



List of topics :

1. Hashnode
2. Medium
3. Dev.to

Hashnode

- Free blogging platform mostly used by developers
- Allows you to embed images, code snippets, and tweets in your blogs
- You can configure Hashnode to push a markdown version of your article to the GitHub as a private repo
- Simply signup and start blogging.

Medium

- A publishing platform where impactful conversations are sparked and ideas are shaped and developed.
- You have a choice between the free version and the paid version membership that provides unlimited access.
- Caters to all genres and is also an excellent platform for developers because of its awesome features, such as code snippets that help to showcase coding skills.
- Content considered extreme or controversial is likely to be pulled down by the editorial team at any point.
- Signing up on medium is simple.

Dev.to

- Online community for software developers.
- Supports both beginners and experienced developers.
- It is a blogging platform, a forum, and a chat room for exchanging ideas, all in one.
- The DEV platform is built on open-source software known as Forem.
- Signing up process is simple.
- Platform has an exhaustive FAQ section which you can use if you get stuck.
- You can sync it with your blog and increase reach.
- You can set up your site's RSS feed, and DEV will import every post from your blog as a draft on DEV.
